

ECG Contest

Response to ECG, December 2015

Respuesta al ECG de diciembre de 2015

Carlos Antonio Álvarez-Ortega

Servicio de Cardiología, Hospital Universitario La Paz, Madrid, Spain

Given the patient's ethnic origin and the findings (intraventricular conduction disorder, multifocal ventricular ectopics, nonsustained ventricular tachycardias, and an inferoposterior aneurysm), Chagas heart disease was suspected; serology was positive. Coronary angiography was performed, showing no lesions of the epicardial arteries. No sustained ventricular tachycardias were induced on electrophysiological study.
